

# Lance Saville, MD

*"I believe in the advancement of robotics as the new standard of care for my patients. Robotic Surgery provides me with complete autonomy, control and 3DHD 10x magnification visualization to see anatomy in ways previously unachievable. The precision that the robot allows for fine motor manipulation of the instruments is greater than the human hand. This is why I offer and believe in Robotics for all my patients. "*

*Dr. Lance Saville*

## DAVINCI ASSISTED SURGERY WITH DR. SAVILLE = BETTER OUTCOMES

Inguinal Hernia Surgery Outcomes	Dr. Saville* 2012-2025	Robotic National Average**	Laparoscopic National Average**	Open National Average**
Modality Adoption	100% dV	58%	23%	19%
Length of Stay**	0.0 days	1.75 days	2.2 days	3.6 days
Conversion Rate	0.0%	0.2%	2.1%	N/A
Operative Time	45 mins	53 mins	42 mins	N/A
Surgical Site Infection %	0%	0.0%	0.56%	8.33%

Dr. Lance Edward Saville provided data for Hernia - Inguinal (all types), da Vinci: 11/2012 - 3/2025. Outcome measures reported in this presentation are selected based on the surgeon's interests and availability of relevant data. Reference: LeBlanc K, Dickens E, Gonzalez A, Gamagami R, Pierce R, Balentine C, Voeller G. Prospective, multicenter, pairwise analysis of robotic-assisted inguinal hernia repair with open and laparoscopic inguinal hernia repair: early results from the Prospective Hernia Study. Hernia. Published online June 3, 2020. doi:10.1007/s10029-020-02224-4)

Data presented for robotic-assisted surgery reflect a single surgeon experience. Reported outcomes may or may not reflect typical patient or surgeon experience. A summary of a peer reviewed study based on large patient populations is available in this presentation and represents additional patient or surgeon experiences. The surgeon's results reported here may or may not be reproducible and are not generalizable. The data are not collected under formalized study. This data comparison is not case matched for patient complexity and/or disease status and may not be comparable across these surgical modalities. DATA ARE NOT PEER REVIEWED AND ARE NOT PUBLISHED. As such, this data presentation should be considered as informational only and is not conclusive. Cost estimates have been independently generated by Intuitive Surgical using cost modeling methodology based on national averages and have not been published or peer-reviewed.

# Patients To Refer

- ✓ Hernias that are enlarging, symptomatic, or causing pain.
- ✓ Symptomatic gallstones, biliary colic, cholecystitis, or gallbladder dysfunction.
- ✓ Colon polyps, diverticulitis, colorectal cancer, or inflammatory bowel disease requiring surgical intervention.
- ✓ GERD, dysphagia, or symptoms not responding to medical treatment.
- ✓ Suspected or confirmed appendicitis.
- ✓ Bariatric Surgery for Weight Loss.

## Why Refer To Dr. Saville?

- ❖ Dr. Saville is a top-rated da Vinci Surgeon in Manhattan, KS. Utilizes a "total practice" robotic/da Vinci model, performing general surgery procedures minimally invasively.
- ❖ Uses the most advanced robotic technology, da Vinci Xi, to provide superior patient outcomes 24/7 to his patients providing all patients access to the best care and technology.
- ❖ Da Vinci Xi surgery allows patients to go home sooner, with less pain, fewer complications, and a faster return to normal daily activities
- ❖ Dr. Saville ranks amongst the Top 10% of GENs in US in da Vinci Robotic Assisted Surgery based on his clinical patient outcomes and Operative Efficiency.

## Patient Experience

"Dr. Saville is friendly, professional, and has an excellent bedside manner. One of those doctors with whom you feel you are in safe hands. I don't see how you could find better than him."

"Dr. Saville has performed 2 procedures for me. His bedside manner is excellent. He made me feel confident and comfortable with all my visits and checkups. If you are reviewing him for weight loss surgery or any surgery just trust him. He will do things right. I love how he answered all my questions with no judgement."

"Dr. Saville has an excellent bedside manner; I couldn't ask for a better surgeon."
